

## MANAGING THE PUBLIC ICT SYSTEM TO INNOVATE AND SIMPLIFY EVERYONE'S LIFE

To implement **innovative services** for the administrations, thereby helping them to be **more efficient, modern** and to **reduce public spending costs**. This is the mission of CSI Piemonte, the Information System Consortium to which Piedmont's Public Administration entrusts the management and implementation of its ICT services. With more than forty years of experience, CSI works in all PA sectors: from health to production activities, from cultural heritage to administrative systems and from the territory to professional training and employment.

Founded in 1977 by the Piedmont Region and the University and Polytechnic of Turin, CSI is recognised at national and international level. Today, the Consortium includes **over 100 of Piedmont's public bodies**: in addition to its founders, the City of Turin, all the Provinces, many Municipalities and associated forms, Health Agencies and Hospitals and Agencies.

Thanks to its experience and expertise, CSI Piemonte promotes technological and organisational innovation in the public sector:

**Security and Cloud Systems**, by evolving the infrastructures and IT systems of the administrations, combining technical design and the supply of network and data centre services, and guaranteeing high levels of security and reliability.

**System Integration**, transforming the thousands of databases created over the years into an integrated public data system, secure and shared between the Consortium members.

**Outsourcing**, managing infrastructure and application services of the local Public Administrations (Region, Provinces, Municipalities, Local Hospitals) and ensuring innovation and efficiency.

**Consultancy and Training**, developing a series of specific activities to allow clients to make the best use of our services, enhancing and strengthening their skills.

**R&D and International Activities**, combining research activity with international level experience to develop projects that support technological evolution and innovation in services aimed at the public administration and the territory.

CSI helps the Region to reduce the digital divide by spreading broadband across the whole territory, thereby guaranteeing that all citizens have access to the Internet and to digital public services. It offers to Piedmont's residents a secure digital identity recognised by all the Administrations.

By working with Piedmont's entire system of administrations, the Consortium also achieves economies of scale, involving significant savings for the Bodies, which can always rely upon high level professional skills.

over **100** CSI stakeholders

**1,300** data bases

€ **120** million  
2017 turnover

**900 km** of fibre optics  
to spread broadband across Piedmont

**2** data centres  
to ensure business continuity

over € **36** million  
value of international projects since 2004
